DETAILED ACTION

Response to Amendment

Claims 1-12 are in the case.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 1. Claims 1-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Hiraya et al (6,612,294).

Hiraya et al teach a fuel injection valve capable of injecting fuel into the combustion chamber, the exhaust valve is set a time for closing to be at a timing on an advance side, and the fuel injected from the fuel injection valve is pressurized together with a residual gas inside the combustion chamber during a period in which both the intake valve and the exhaust valve remain closed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the

invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sato (6,405,695) in view of Hiraya et al (6,612,294).

Sato teach the exhaust valve is set a time for closing to be at a timing on an advance side with respect to an intake top dead center. Hiraya et al teach the fuel injected from the fuel injection valve is pressurized together with a residual gas inside the combustion chamber during a period in which both the intake valve and the exhaust valve remain closed. Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ the injection of fuel during a period in which both the intake and exhaust valve remain closed on the engine of Sato as taught by Hiraya et al in order to improve the engine stability.

Response to Arguments

3. Applicant's arguments, see pages 2-3, filed on April 25, 2005, with respect claim(s) 1-12 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Sato (6,405,695) and Hiraya et al (6,612,294).

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hai H. Huynh whose telephone number is (571) 272-
